

# THE PULSE

OF LONG ISLAND

## INSIDE THIS ISSUE

- + IEEE LI Section **Chair's Message** | 2
- + **Letter from the Pulse Editor:**  
Writing & Editing for a Technology Magazine | 5
- + **ARTICLE:** IEEE Micromouse of Long Island Competition 2023 | 7 - 8
- + **ARTICLE:** Stony Brook University IEEE Student Branch:  
2023 IEEE LI Micromouse Competition Experience | 9 - 10
- + IEEE LI Section 2023 **Power Electronics Symposium** | 11

Happy Summer Solstice, Everyone! The Section has made gallant efforts to stay engaged by getting connected and getting involved. Some shining examples include the newest ExCom leaders, Gabriella Carini, Nuclear and Plasma Sciences (NPS) Chair, and Srinivas Sridhar, Vice Chair of Microwave Theory and Techniques (MTT).

The month of May yielded many successful events at New York Tech, such as the **Long Island Systems, Applications, and Technology (LISAT) Conference**. Attendees included distinguished lecturers, industry professionals, faculty, researchers, students, and exhibitors. Next was our outstanding **Micromouse of Long Island competition**. Each student team made a technical presentation to IEEE judges, fully describing their robot. Trophies for "Presentation" and "Unique Robot" were awarded independent of the Maze Run outcomes. In addition, Women in Engineering awards were given to teams with female members. I want to thank and congratulate the organizing committees for both stellar events. Finally, we hosted our first ExCom meeting at Zebra Technologies, and this hybrid gathering had excellent attendance. Zebra Engineers welcomed ExCom during the meet-n-greet, and many stayed on to attend the meeting.

A few notable **RAS workshops** held in June were "*Artificial General Intelligence*" at the Huntington Senior Citizens Center and "*Intro to Robotics for Tweens*" at the Harborfields Public Library. In addition, we celebrated "PELS" Day at Chilis; an informal social with great food and conversation.

In conclusion, as we look forward to the next series of events, please consider submitting your abstract for the November 2, 2023 **Power Electronics Society (PELS) Symposium** or contact the organizers to volunteer to help. Don't forget to mark your calendars on March 21st, 2024 for the **2024 Long Island Section Awards Banquet** at the Crest Hollow Country Club. **As always, please continue to get connected and get involved and enjoy the summer!**

Warm Regards,

**Rhonda Green**  
2023 IEEE Long Island Section Chair

# On Writing and Editing for a TECHNOLOGY MAGAZINE

Andrew Ritter  
Pulse Editor, IEEE LI Section

Since taking over the editor role at the beginning of 2023, I have been considering how I can help *Pulse* to be a valuable resource for others. Most of my focus has been on creating repeatable features, like chapter spotlights, which I plan to start in the next edition. Promoting upcoming events and augmenting their reach seems a worthy goal as well.

Recently, the question was posed to me by our esteemed chair, *“What can an editor do for a scientist or technologist looking to publish?”* Her question came in the context of Zebra Technologies hosting the latest ExComm meeting, the query being a way of exploring what the Long Island Section of IEEE offers potential new members.

### This is a great question.

An editor is a specialist in the forms of writing; therefore, it stands to reason that an editor can help to produce quality publications. So I think, to answer the question best, we need to step back and question, *“Why is writing important to science & technology?”* After all, what is the reason to desire good writing?

Writing is a multidimensional tool for communication. It can reference many things in a single corpus and be revisited as often as necessary. Writing can explain complicated concepts and even be geared for different audiences to better understand those concepts. One of the most essential emergents of writing is the story. A well-designed story successfully delivers a message within a context with a consistent voice to an audience whose capacity to understand is the writer’s target. These four elements: context, message, voice & audience are essential for a story to connect.

One of the things an editor can do is to help the writer to find the story. This means identifying those story elements and co-developing their writing to address the

needs of each. The editor can also help to program the many interacting elements that make a written work function as intended.

### A story follows a form.

Typically, that form is of a bell curve; the beginning is an introduction, the middle addresses the problem, and the end sums it all up. Writing, forming the pipelines of the story, must be clear and concise and follow grammar rules for syntax, morphology and semantics.

An editor can help a writer improve these aspects of their writing, which will enhance the efficacy of the goal of communication. In a way, an editor (and a writer) is an engineer of ideas. The story can be seen as an interface. An interface between ideas and the audience. Writing, then, is a layer wherein the elements coalesce and are delivered to the reader.

An engineering editor functions by removing noise and refining the signal through editing techniques, thereby creating a coherent interface for the ideas to be transmitted to the reader. The task of improving the clearness of a story is paralleled well by Claude Shannon’s Information theory, wherein he ascribes the Shannon Limit to indicate a relationship between entropy and clarity in the information signal.

Through feedback, the editor can assist the writer with message and content development & correct errors in grammar and form, which might lead to greater entropy and thus dampen the interface that is the story.

Writing, just like science and technology, is a seemingly never-ending journey. Perhaps that’s why we like them so much.

I hope you enjoy this and future editions of *Pulse*.

MARK YOUR CALENDAR: **MARCH 21, 2024**

# MICROMOUSE OF LONG ISLAND COMPETITION 2023

Dr. Andrew R. Sass, *Vice Chair, IEEE LI Robotics & Automation Society*

The **MICROMOUSE OF LONG ISLAND** project was conceived as a way to bring an important technology challenge to college students on Long Island. This STEM opportunity extended to the Greater New York area, including New Jersey and Connecticut.

Inherent in the IEEE charter is a mission to encourage and educate aspiring electrical engineering students in the art and science of this important technical discipline. It was this tenet of support that inspired me to pursue instituting the Micromouse Competition as a natural way of accomplishing this mission.

Those readers unfamiliar with the history and details of Micromouse Competition are referred to extensive Internet literature on the subject. Briefly, the Competition, was conceived by the Editor of IEEE's Spectrum in the 1970's. It consists of a palm-size robot which has to autonomously navigate through a 16 x 16 maze from a Start at one

The Long Island Micromouse event was a major challenge in that it was conceived, designed and implemented within a six-month period. The experience, capability, and assistance of Student Activities, Region 1, under the able leadership of Gim Soon Wan was invaluable. This assistance included the loan of the Maze itself, which Soon hand-delivered to the competition venue at NYIT in Old Westbury, LI. Without Soon's active participation, I could not have brought this project to fruition.

New York Institute of Technology, Old Westbury campus provided a wonderful venue for the Competition. The complex support provided by Dr. Milan Toma and assistance of the Dean of College of Engineering and Computing Sciences, Dr. Babak Beheshti was invaluable to the successful completion of the project.

I mounted an extensive publicity campaign early in the project with the help of Andrew Ritter, Pulse Editor and RAS Chapter Webmaster. This resulted in 5 teams from

corner to a Goal in the Maze center with no foregoing knowledge of the labyrinthian pattern.

◀ CONTINUED FROM PAGE 7

colleges in the Greater New York Area responding. Considering the number of engineering colleges in the area, the response was quite gratifying. A parallel publicity campaign was aimed at secondary schools on Long Island.

While only one high school responded, we are developing a strategy to continue to encourage high schools to participate in this and similar robot activities in the 2024 season of Micromouse of Long Island.

On the day of Competition, May 12, 2023, Dr. Milan Toma, Shel Lipsky (RAS Chapter Treasurer), and I assisted Soon in unloading and carrying the Maze into the competition venue. Following Soon's training, Shel became quite proficient in wall setup according to the "Practice Design" and my "Competition Design"; both of which included the "MM LI 2023" logo as part of the maze.

Each robot in the 2023 Competition combined complex hardware and software design and implementation. I set

up a series of team presentations by individual teams to a panel of Judges prior to the maze runs. This gave students the opportunity to show their presentation skills and to showcase their individual robots. Presentation skills are so very important to future engineering students, so this was a worthwhile feature of the competition.

The overall participation of students in Micromouse of Long Island exceeded our expectations, as did the quality of students, their knowledge, and their robot entries. Micromouse Maze, being designed such that some walls are not connected to the outside wall, is known to be a significant challenge for both engineering students and practicing engineers with years of experience. It is no surprise that few if any entries in Regional Competitions, are 100% successful in reaching the Competition Center Goal. Relative success is the keynote of most competitions; this was the case in Micromouse of Long Island and there was great excitement as robot entries attempted to outdo each other.

## STONY BROOK UNIVERSITY IEEE STUDENT BRANCH: 2023 IEEE LI MICROMOUSE COMPETITION EXPERIENCE

Rachel Leong, Christopher Lobato,  
Thomas Montchal, Ryuichi Lin  
*Stony Brook University IEEE Student Branch*

**The Stony Brook University IEEE Student Branch** (IEEE at SBU) had first heard about Micromouse while organizing a workshop series called the OPS Program whose capstone project was creating a palm-sized, maze-solving robot, inspired by the decades-old competition. However, it was not until we attended the IEEE Micromouse Competition at MIT in Oct. 2022 that we were hooked and decided to compete at the next competition. Thomas and Ryuichi were more experienced in PCB Design through coursework and took care of the hardware, while Christopher and Rachel had a stronger programming background and focused on the software.

Through working on our OPS Program, we got an idea of the necessary components needed to create a functional mouse. Thomas and Ryuichi became familiar with IR sensors, H-bridges, and encoders and incorporated these into the PCB. The PCB design underwent several changes to optimize different aspects of the mouse's design like motor placement, sensor placement, and pin routing on the microcontroller.

During the design phase, Thomas and Ryuichi learned how to utilize Fusion 360 to create custom motor mounts while also grappling with the limitations of our hardware.

With help from IEEE at SBU's faculty advisor, Alex Doboli, they came up with ways to incorporate a switch on the mouse for switching between algorithms after running out of pins to use on the microcontroller. The last few weeks before the competition involved retesting the hardware prior to ordering the final. Components were hand-soldered onto the PCB, and the hardware was then handed off to Christopher to program the movement and PID contro

Initially, we thought that it would be possible to move the mouse without implementing a PID controller. However, we soon determined that it was crucial to prevent the mouse from getting stuck. We were not very familiar with PID, but after reading about how line-following robots utilize PID Controllers to move in a straight line, Christopher decided to use the motor's encoders and the IR

CONTINUED ON PAGE 10 ►

◀ CONTINUED FROM PAGE 9

sensors to develop a PID controller for distance and angle control. In the final two days, through trial and error and some energy drinks, we were able to implement smoother movement on the mouse.

While all the hardware was being developed, Rachel worked on coding the abstract elements of the software, including how to store information about the maze, maze traversal, and maze-solving algorithms. The programming language of choice was C++, selected for its similarity to Arduino and easier portability into the microcontroller. The software was broken down into several smaller tasks.

The first task was determining how to store information about the maze. Next was creating and testing abstract functions for moving forward, turning, and checking for walls which could easily be adjusted for the actual hardware-tested functions that Christopher was working on. Finally, the maze-solving algorithm would be selected and written. Trémaux's algorithm was used to do the initial traversal of the maze and A\* was used to find the shortest path to the goal. The program was coded using Visual Studio Code and tested using a Micromouse simulator found on GitHub.

Attending the competition was a fun, rewarding experience. The drive to NYIT's Old Westbury Campus was much shorter than the one to MIT given its proximity to Stony Brook. When we got there, we refined our mouse before presenting it to a panel of judges. We were initially unsure of how our own mouse would hold up against the competition since ours still had issues detecting walls, but we were confident that we could win. It was suspenseful watching the mice slowly approach the goal, but there was great sportsmanship as everyone celebrated when any of them got close, regardless of whose team it belonged to. While our mouse did not reach the goal, we were

overjoyed to find out that it got the closest and that we won first place.

In addition to competing, our team and other spectating members of IEEE at SBU were also able to meet and talk with the other competing teams from Region 1. Hearing and seeing how other teams designed and programmed their mice gave us valuable insight and ideas for how to differently approach and improve our mouse for future competitions which we will definitely try to compete at.

This experience would not have been possible without the support of the IEEE Long Island Section and, especially, Gim Soon Wan, who was generous enough to drive the maze from Massachusetts to SBU for our own internal Micromouse Competition, before driving it to NYIT for the Region 1 Competition. He provided us valuable insight from his experience as a world champion in Micromouse. Thank you all for a truly unforgettable experience and we hope to see it continue next year.

THURSDAY, NOVEMBER 2, 2023 • RADISSON HOTEL, 110 MOTOR PKWY, HAUPPAUGE LI • NOON TO 8 PM

## IEEE LI SECTION **POWER ELECTRONICS SYMPOSIUM 2023**

The Long Island Power Electronics Symposium & Exhibits is the area's premier annual event that brings together the power electronics community. All professionals (engineers, managers, etc.) involved in the use, design, qualification, test, procurement or manufacture of power supplies, power converters, power management, servos or energy storage are invited. All sectors of power electronics are represented including military, industrial, medical, space, consumer & automotive. **This event is free for attendees** but please register in advance to maximize your experience. Registered attendees will receive admission to the exhibit floor, technical lectures, complimentary lunch, and the complimentary dinner. The first 200 registered attendees will also receive a complimentary swag bag with gifts from our exhibitors.

### CALL FOR PAPERS

Abstract, viewgraphs, speaker bios and speaker contact information are due **October 6, 2023**. Scheduling of qualified papers is accomplished on a first-come/first-served basis. Notification of acceptance by **October 17, 2023**.

#### FREE GENERAL ATTENDANCE

A **free invitation** is extended to all professionals (Engineers, Managers, etc.) involved in the use, design, qualification, test or manufacture of power supplies, power converters, power management or energy storage. This event is free for attendees but please register to enhance your experience. Registered attendees will receive complimentary networking lunch, admission to the exhibit floor, technical lectures, and the complimentary networking dinner. The first 200 registered attendees will also receive a complimentary swag bag.

#### EXHIBITORS

Limited exhibitor space is available to companies & representatives involved in the design, qualification, test or manufacture of power supplies, power converters, power management or energy storage. Tables are 2.5' x 8' and are provided with two chairs. All exhibitors are invited to provide business cards and giveaways for the swag bags given to the first 200 registered attendees. Exhibitors are also invited to enjoy the complimentary networking lunch and the complimentary networking dinner. All tables are offered at \$450.

#### SPONSORS

A sponsorship upgrade entitles you to one free table with a preferential position and inclusion on the symposium flyers and posters at the event. 6 sponsorship options are available; swag bag sponsorship (limit 5), lunch sponsorship (limit 1), coffee break sponsorship (limit 1), beer cart sponsorship (limit 1), wine cart sponsorship (limit 1) and dinner sponsorship (limit 2). Sponsorship opportunities are available on a first-come, first-served basis. All sponsorships are offered at \$1000.

FOR MORE INFORMATION, GENERAL REGISTRATION, EXHIBITOR REGISTRATION, SPONSOR REGISTRATION AND CALL FOR PAPERS: [www.ieee.li/pes](http://www.ieee.li/pes)

# LET YOUR VOICE BE HEARD

## WRITE TO THE PULSE

The Pulse of Long Island is a newsletter for the members of the IEEE Long Island Section. You can let your voice heard by writing to the Editor. How to bring more value to our members? Interesting new technology, or a project? An issue of interest to members of the IEEE Long Island, Long Island engineers and computer professionals, or Long Island technical community at large? Write to the **Pulse**. Let your letter be read, and your voice heard.

## HOW CAN I CONTRIBUTE TO THE PULSE?

Send your letters or articles via email to [pulse@ieee.li](mailto:pulse@ieee.li). If selected for publication, the letter or article will be edited before being published.

### ADVERTISERS:

Please contact us at [pulse@ieee.li](mailto:pulse@ieee.li) for advertising rates.

### CONTRIBUTION DEADLINE:

20th of a month for the next month edition.

### CONTRIBUTIONS FROM LONG ISLAND TECHNICAL & ENGINEERING COMPANIES:

Publish your technology-related press release (up to one page) at no cost. Please send the press release as a PDF file attached to email to [pulse@ieee.li](mailto:pulse@ieee.li), addressed to the Editor, with a Subject line "Pulse -PR" followed by your company name, and the responsible contact person's name, email and phone number in the email body.

# IEEE MEMBERSHIP and MEMBER BENEFITS

IEEE membership offers access to technical innovation, cutting-edge information, networking opportunities, and exclusive member benefits. Members support IEEE's mission to advance technology for humanity and the profession, while memberships build a platform to introduce careers in technology to students around the world.

## JOIN IEEE OR RENEW YOUR MEMBERSHIP

Reach your full potential as part of the world's largest technology community. Join professionals, experts, and advisors who can help shape your career, offer resources to acquire new skills, and advance your professional development.

## MEMBER BENEFITS

As an IEEE member, you'll be presented with new resources, valuable opportunities, and many discounts that will help you advance your career in the right direction. You can find colleagues who share your vision and commitment—those who are moving technology forward today.

## ENHANCE YOUR MEMBERSHIP- JOIN AN IEEE SOCIETY

IEEE Societies provide members with opportunities to connect with experts and network with colleagues locally and abroad—all while staying up-to-date on technology and trends in their industry.

## GIFT OF MEMBERSHIP

IEEE membership delivers access to the industry's most essential technical information and provides networking opportunities both locally and globally. Members have the ability to stay current in their chosen profession, connect with peers, and invest in their future.

## MEMBER-GET-A-MEMBER

Consider sharing your IEEE membership experience and get rewarded for doing so. Through the Member-Get-a-Member (MGM) program, IEEE rewards your efforts in recruiting new members. Your local IEEE Section can also benefit.

## IEEE.tv

Made possible by IEEE members, IEEE.tv is an award-winning, Internet-based television network, producing special-interest programming about technology and engineering for IEEE members and the general public.

Get access with new resources, valuable opportunities, and many discounts that will help you advance your career in the right direction.

## WHEN YOU JOIN IEEE, YOU:

- Join a community of over 425,000 technology and engineering professionals united by a common desire to continuously learn, interact, collaborate, and innovate
- Get the resources and opportunities you need to keep on top of changes in technology
- Get involved in standards development
- Network with other professionals in your local area or within a specific technical interest
- Mentor the next generation of engineers and technologists and so much more.

IEEE members can access information on local events and activities by signing in to myIEEE, the members' personalized gateway to IEEE membership. In addition, members can also:

- Access individual Society memberships and subscriptions
- Connect with local IEEE Sections and volunteer leadership
- Find upcoming conferences
- Learn more about individual benefits
- Read the latest news from IEEE, IEEE Spectrum, IEEE Standards News, and The Institute

## No need to over-engineer this.

Satisfaction will increase with exclusive IEEE member discounts and insurance.

Special, low pricing creates high value for IEEE Members.\* Tap into exclusive member discounts on products and services from trusted brands.

\*Where available

Price  $\swarrow$  Value

Leverage your IEEE membership today! Visit [iee.org/discounts](http://iee.org/discounts) and learn how this inverse relationship can be a proven formula.

*You've Always Set Yourself Apart. Now it's Time to make it Official. Nominate Yourself to become a...*

## **IEEE SENIOR MEMBER**

Being elevated to senior member recognizes people who have moved beyond entry-level work in their careers. It also encourages them to engage more broadly with engineers and other technical professionals in companies and universities outside their own. To be eligible for senior member status, members must have worked in a professional capacity in a technical field for at least 10 years. Educational experience is partially credited toward that time. Nominees must also have professional references from three IEEE senior members, Fellows, or honorary members. If you're interested in elevation, you don't have to wait to be nominated—you can nominate yourself.

**>> APPLY FOR SENIOR MEMBER GRADE**

## **IEEE LIFE MEMBERS, WRITE FOR THE PULSE!**

The Section is inviting you to record your stories and histories in our monthly publication, the *Long Island Pulse*. An article of approximately 300 – 350 words is recommended.

**LET US HEAR FROM YOU.**

Send your article to: [pulse@ieee.li](mailto:pulse@ieee.li)  
Life Member Chair: [life@ieee.li](mailto:life@ieee.li)

The **IEEE Long Island Section** has held meetings with many of our Life Members and Senior Engineers, in recent months. Your stories and histories in engineering are interesting, inspiring and should be recorded for future generations. You have served your profession for many years, many have served our country in the military, many as engineers fighting the Cold War. The many contributions are the legacy to this new digital age, space age, environmental age and beyond.

**WANTED: IEEE LIFE MEMBER NEEDED TO VOLUNTEER TO SUBMIT A MONTHLY HISTORY ARTICLE FOR THE PULSE**

The **PULSE** is seeking a IEEE LI Life Member to write the *Long Island Electrical & Electronic History* monthly article for the **Pulse**. If interested contact [pulse@ieee.li](mailto:pulse@ieee.li)

## **WE WANT YOUR STORIES**

**IEEE  
CONSULTANTS  
NETWORK OF  
LONG ISLAND**

**THE IEEE CONSULTANTS NETWORK OF LONG ISLAND (LICN)**

is a nonprofit professional organization affiliated with the Institute of Electrical and Electronics Engineers. Our members include dozens of electrical, electronic, mechanical and software engineers with expertise in over 65 categories of technology and business. All are members of the IEEE and adhere to the IEEE professional codes of ethics.
